Information Technology

DEDICATION

To our dearest parents and
all family members
who motivated, supported and
encouraged us in our studies and life.

DECLARATION

We hereby declare that this software neither as whole nor as part has been copied out from any source. It is further declared that we have developed this software and accompanied report entirely on the basis of our personal efforts, under the sincere guidance of our teachers especially our project supervisor Mr. Abdul Subhan and our project supervisor in the organization Mr. Waqar Arshad. If any part of this system is proved to be copied out from any source or found to be reproduction of some one else, we shall stand be the consequences

Saad & Waseem

ACKNOWLEDGEMENT

Project work is compulsory part of the PGD-IT. It consists of software development and final documentation of the software developed. We were allocated the office system and thus chosen "E-I-System of READ Foundation" as our project work. It was blessing of Almighty Allah, the guidance of my supervisor, Director and extended cooperation of Mr. Waqar Arshad, Software Engineer (D-P-S) and project supervisor (READ Foundation) that we've completed this project work successfully.

We owe a great deal too all respected teachers and well wishing friends especially Sohaib Ammar. We also owe to our sweet parents, and all family members who encouraged and supported us in our studies and whole life.

Saad & Waseem

PREFACE

This dissertation deals with the automation of "Employee Information System of READ Foundation". It comprises of six chapters and three appendices. Brief overview of these chapters is as follows:

The first chapter provides introduction of READ Foundation, its capabilities and its organizational structure. It also includes project introduction. Second chapter includes the existing system study and its drawbacks. The third chapter deals with the proposed system. In this chapter the project overview is given .it also includes the objectives of the proposed system. The fourth chapter explains database design and development of the system. The fifth chapter is related to system testing implementation and conversion of existing system to proposed system. The sixth chapter deals with the conclusion. Seventh chapter is Screen layouts of the software and finally references are given and appendices are for the Data Flow Diagrams, Entity Relationshiop Diagram and Bachman Diagram.

ABSTRACT

This project report deals with E-I System of READ Foundation. The existing system is manual and we were given responsibility to automate it, the report describes the working of the existing manual system of the new developed system.

The new automated system was developed keeping in mind the idea of providing ease in operation and information to the management so that they accomplish their tasks well with in time.

The system also provides the facility to retrieve information as printed reports and queries. The information stored in the database is manipulated, with the help of form layouts designed for the system.

PROJECT IN BRIEF

Project Title:	Employee Information System
Objectives:	To develop the software to provide timely and accurate information to the management about Employees
Undertaken by:	Saad Liaqat & Waseem Mehmood
Supervised by:	Mr. Abdul Subhan
Date Started:	Jan' 2005
Date Completed:	Mar' 2005
Tool Used:	Oracle 8i, Developer 6i
Operating System:	Microsoft Windows 2000 Professional
System Used:	Pentium IV

INTRODUCTION

INTRODUCTION

In view of the importance of the development and progress of any organization, its very necessary that the information is provided in easy and quick format.

We tried to develop such a common information system which is a useful, user friendly and most importantly applicable in approximately all Organizations.

The facilities, benefits and experience we've got through this project are mentioned below. But in short we can say that due to combination of static & dynamic values this project has been transformed into a most demanding and powerful touch in database management environment. Consisting on any type of information about the employees, their attendance, short leaves, salaries, other leaves etc etc, this database will helps us to get any type of information with in few seconds, plus, it make very easy atmosphere for the data entry operators.

-2-

THE EXISTING SYSTEM

INTRODUCTION TO THE EXISTING SYSTEMS:

The existing system is manual system. To maintain the existing system is so difficult and problematic, so much time taking, and huge numbers of papers, files are used for maintaining the records of employees which are very difficult to maintain for the client, to maintain each and every record of the employees, it has following modules;

- Data Entry Management
- Update Equivalence Record

Data Entry Management

This module keeps the information based on the following details;

- The management keeps the record manually.
- The wastage of paper and files.
- It is so much time consuming and problematic.
- More the employees are required to maintain and handle the manual record.
- The reports are so difficult, and can extract a lot of time.

Data Entry

This module keeps the information based on the following details;

- It is so difficult to enter updated records in the manual systems.
- It is not the efficient way for editing the old existing records.
- The updating of data is done manually,

DRAWBACKS IN THE EXISTING SYSTEM

There are a number of drawbacks in the existing systems, which are greatly increase cost, manpower and time taking factors, and on other hand decrease the efficiency and record accuracy. The following are the main drawbacks.

WASTAGE OF TIME

The existing system is difficult to use and time consuming because a system is maintained in the bulk of paper files and in Microsoft Word and Excel and many time work has been done manually.

LACK OF MANAGEMENT

The system has not been completely maintained. The complex modules are not defined and the system is just a storage place. Most of the functions are occurring on the conceptions of user.

HARD TO MAINTAIN

The maintenances of the system is not easy because huge bulk of paper, MS Word document and Excel Sheets requires a lot of searching and sorting for any specific equivalence for the Employees.

NO REPORT GENERATION

The report generation for the management is in the form of a book that is updated on annual basis. This document did not provide the exact situation because the management does not have the latest information about the Employees, if in case they somehow manage to get the latest information about the Equivalence cases, it takes lot of time, currently data is maintained in simple text files.

NO UNDERSTANDING OF ADVANCE TECHNOLOGY

The management has no idea of current scenario. They don't know the efficiency of computerized data structure. They didn't rely in the advance technology; the skilled and advanced people are required to maintain the advance technology.

-3-

THE PROPOSED
SYSTEM

SCOPE OF THE PROPOSED SYSTEM:

The scope of a proposed system means that which areas are being covered by the system. The scope clearly defines the boundaries of the proposed systems. The functional areas of the organization that lies under the scope of the proposed systems is "EMPLOYEE INFORMATION SYSTEM".

PROJECT OVERVIEW

Following will be the sub system of the proposed "EMPLOYEE INFORMATION SYSTEM".

- Management of Employees
- Management of data.
- Management of office Performa rules of an office.
- Management of the reports of the required information related to Employees.
- It will make easy for the management to work on it.

MANAGEMENT OF EMPLOYEES INFORMATION

This sub system will provide ease for the management of the organization. This system facilitates the user by reducing the burden of writing in the simple text files and table that are usually made in Microsoft Word and Excel. The management of organization is done in such a way that system will maintain all the office rules that are made in tables. It included the basic personal information of the employees. The rules are awarded with a unique code that is automatically assigned by the system. User can ADD in it, can EDIT in it, and can UPDATE the rules with the help of a search form that

will make the change in the database. The whole system of office is based on these predefine rules.

MANAGEMENT OF DATA

In the system is become very easy to maintain the millions of records. ORACLE is very highly securable database. It facilitates the user to depend on it. Data entry operator can ADD data in it, can EDIT in it, and can UPDATE the rules with the help of forms that will make the change in the database.

MANAGEMENT OF OFFICE PERFORMA RULES OF AN OFFICE

Office Performa rules also play an important role in the whole system. These rules are the backbone of the entire system because these rules infected the discipline and can affect the positive environment of the office. In the system there are proper rules mentions by the management. Like in the attendance system, the proper check in time and check out time these all according to the rules of the top management.

MANAGEMENT OF THE REPORTS OF THE REQUIRED INFORMATION RELATED TO EMPLOYEES

Due to the ORACLE database, it is so easy to extract the reports from database.

IT WILL MAKE EASY FOR THE MANAGEMENT TO WORK ON IT

Oracle is the easiest way of managing the database. It will be operationally feasible because it will be efficient, accurate and reliable and will provide more facilities than the manual system or any other available system.

PROJECT OBJECTIVES

The objective of the project describe that what is to be ultimately achieve from the development of the project. It is always essential and helpful before designing a computer based system, to understand the entire objective and requirements that Computer Based System is expected to satisfy. In addition, the relative importance of each objective should also be understood.

The proposed system is required to fulfill the following objectives:

- To increase the reliability of the system to an extent meeting the actual requirement of the organization.
- To assure the availability of the information at the right time.
- To increase the performance of the organization.
- To complete the conversion of the manual system into a Computerized System.
- To remove the drawbacks of the existing system.
- To make the information storage, processing and retrieving efficient.
- To provide a system with a user interface which is simple to understand and efficient to use.

MAIN FEATURE OF THE PROPOSED SYSTEM

The proposed system has the following major features.

EFFICIENT

Efficiency of any system is concerned with the minimum transaction processing time as well as the optimal use of the system resources. In designing the proposed system, the efficient factor has been taken well into consideration.

USER FRIENDLY INTERFACE

The interface of the system will be user friendly. The data retrieval, insertion, editing will be made easy and simple, so that a common user can handle the database efficiently.

MINIMUM REDUNDANCY

In the proposed system all the master data is stored in unique tables and other tables can access this data through their child tables of values. So, these are a minimum chance of data redundancy.

FACILITATED DATA INPUT

The simple to use data entry form will be provided to facilitate the user to enter the data in the database. The powerful data entry controls have been provided to view, add and modify the field of a record.

REPORT GENERATION

The proposed system will generate two types of reports according to the requirements of the Organization.
First is of type parametric, which contains some option for the user to generate the reports. e.g. enter the rules number
Second type of report is generation of the

-4-

SYSTEM DESIGN & DEVELOPMENT

SYSTEM DESIGN & DEVELOPMENT

INTRODUCTION

The Design phase begins when the requirements are available. As, we'd to do every thing behalf our knowledge & research, thus, it however gave us tough time in the start.

In the design phase, all the processes of the proposed system are designed. This means, to identify different processes, their implementation & interaction with one another.

The design of the system is the best if a system built precisely according to it completey satisfies the requirements specifications documents.

DESIGN PHASE

An ideal system design has the following design objectives:

SIMPLICITY

The system design should be simple to understand. This helps to simplify the task of development of the system. Also the maintenance will be easy and the maintenance cost of the system can be reduced.

VERIFIABILITY

The verifiability of design means that the correctness of the design can easily be proven to be according to the requirement specifications.

COMPLETENESS

The system design is said to be complete if all the components and detailed aspects of the design are specified. All the modules, interfaces and data relationship should be specified.

INTRODUCTION TO DATABASE DESIGN

Database is the collection of data with some logical relationship within the data. Database is used to store data that is required by the system. To be able to successfully design and maintain database the following steps should be taken:

- Identification of data entities
- Identification of attributes of each data entity
- Identify the relationship between the data entities

DATA MODELS

A data model is a logical scheme of data, which represent all the data entities and the relationship among them. There are three types of data models:

- Hierarchical Data Model
- Network Data Model

- Relational Data Model

The description of each data model is following:

HIERARCHICAL DATA MODEL

This data model is based on Parent-Child relationship. In this data model, a parent entity can have many Children entities but a Child entity can be related to one and only one Parent. Hence the major drawback of this model is that many-to-many relationships between two data entities cannot be represented.

NETWORK DATA MODEL

This data model allows many-to-many relationship between the data entities. A parent entity can have many children entities and vice versa is also true.

RELATIONAL DATA MODEL

This is the most popular data model. A relational database user tables called "Relation" to store information. A data table represents each entity.

This data model has the following characteristics:

The relational data model represents the data in form of tables consisting of rows and columns

The columns of data table represent the distinct attributes of an entity while the row corresponds to the records.

Most data management systems based on the relational model have a built-in query support for query languages.

Data security comes under the central control of RDBMS

-5-

IMPLEMENTATION

SOFTWARE SELECTION

The system is developed using Developer 6/6i as front-end & oracle 8i as backend tool.

INTRODUCTION TO SYSTEM TESTING

Before system is implemented system testing is an important step for the development of a reliable and error-free system. Testing is the process of executing a program keeping in mind the requirement of the user & finding errors. A test case is a set of data items that the system processes as normal input. A successful test is the one, which does find an error.

TESTING STRETEGIES

Two basic strategies that are used for testing are follows

CODE TESTING

the source code was tested exclusively by executing the program under various possible conditions and situations and for different values and ranges of input data. The logic of the program was examined using database management system (Oracle) , it was tried to the best to make every statement in the program execute using dummy data or by explicitly creating dummy conditions.

SPECIFICATION TESTING

Even if code testing is preformed exclusively, it doesn't ensure against program failure. Code testing doesn't answers whether the code meets the agreed specification documented in the required specifications document. It doesn't determined whether all aspects of the design or implemented. Therefore, examining specifications performs specifications testing, stating what program should do and how it should behave under various conditions. Test cases are developed to test the range of values expected including both valid and invalid data. It helps in finding discrepancies between the system and its original objectives, current specifications and system

documentation. During this testing phase all efforts were made to remove programming the bugs and minor design faults.

CONVERSION FROM EXISTING SYSTEM TO PROPOSED SYSTEM

Conversion is the process of replacing the old system with new one. There are three different approaches for performing system conversion and insuring proper working of the system. The processes are :

PILOT CONVERSION

In this approach the system is implemented in one particular area of the organization or the department. Thus, the system is implemented in parts, the remaining departments or areas continue to work with the old system. The only advantage of this system is that it provides sound basis for the whole system to be installed.

-6-

CONCLUSION

WHAT I HAVE ACHIEVED

After development and finalizing this project I feel a real taste of achievement. Developing a system by self analysis, design and test is a bit difficult but provides a real chance of practical learning. During the development of this project I have achieved the following benefits:

- Project management and time scheduling
- Interacting and interfering user
- Analyzing the system data collection according to user requirements
- Good working knowledge of system design and test
- During designing phase, I learnt some new features of the software like ERD Studio Max, TOAD (Quest Software) etc

LIMITATIONS

We were really keen to implement on the system on the web using oracle 9i, but due to some organizational constraints that it was not possible at this stage.

FUTURE ENHANCEMENTS

Following enhancements can be made after sometime, when the organization thinks that they switch to web based development in Oracle & Developer 9i

- Connectivity of the database using live IP
- Online transactions are expected in near future

The screenshot shows a Windows application window titled "READ Foundation Human Resource System". The window has a menu bar with "File", "Edit", "View", "Report", "Help", and "Exit". On the left is a logo for "READ Foundation". The main area displays the title "Human Resource System" and a "Report(s) Menu" with three options: "Personnel Report(s)", "Attendance Log", and "Back". At the bottom are standard Windows toolbar icons for file operations like Open, Save, Print, and Help.
